- [New Local Build Environment Features](#) [2]

We have just created osc 0.167 release which focuses on the local build functionality. It is way easier now to deal with VM builds (eg. inside of KVM) and also building for foreign hardware architecture becomes way easier now.

- [Highlights of YaST Development Sprint 90](#) [3]

As usual, during this sprint we have been working on a wide range of topics. The release of the next (open)SUSE versions is approaching and we need to pay attention to important changes like the new installation media or the /usr/etc and /etc split.
