- [Open Build Service: Look Back at 2019](#) [2]

Despite the changes experienced along the year, we are very proud of our achievements, especially the revamping of our user interface :heart_eyes_cat:. We opted for a new and well-known technology which made frontend code easier to maintain and more attractive for contributors. Now we are delighted with such a success, we received many contributions and feedback, and most of our users appreciate the fresh and modern look and feel of Open Build Service (OBS).

- [Root cause analysis of the OBS downtime 2019-12-14](#) [3]

Around 16:00 CET at 2019-12-14, one of the Open Build Service (OBS) virtualization servers (which run some of the backend machines) decided to stop operating. Reason: a power failure in one of the UPS systems. Other than normal, this single server had both power supplies on the same UPS - resulting in a complete power loss, while all other servers were still powered via their redundant power supply.

- [IPv6 for machines in Provo](#) [4]

Sadly neither the forums nor WordPress instances are IPv6 enabled. But we are hoping for the best: this is something we like to work on next year...
