Brave is an open-source, privacy-focused web browser for Mac, Linux, Windows, iOS, and Android. It automatically blocks advertisements and trackers out of the box and replaces them with ?Brave Ad Replacement,? a program that lets users directly contribute to their favorite websites.

The Brave browser is the brain-child of former Firefox CEO Brendan Eich and Firefox CTO Brian Bondy. Under the hood, it uses Chromium, ensuring that users get privacy as well as access to their favorite Google services, and extensions. If you're a privacy geek, ditch Chrome and check out Brave!
