- [SUSE Support: Online and Always On](#) [2]

SUSE has curated discussion forums that are monitored by our team, but community-run. From SUSE Linux Enterprise discussions to Kubernetes and Containers, there's a forum for everyone. And, our forums are super active. They are a great place to discuss and obtain answers in regard to a number of SUSE products and open source solutions.

Whether you want to ask questions, respond to any forum message or tell us about your latest adventure with your SUSE product, forums are the place for you. Extend a helping hand to one of your fellow users by jumping into the conversations. Don't be shy. Even if you are not sure of your answer, the input from multiple sources gives the person asking the question options. While not 'official' support from SUSE, the participants share so much experience and technical expertise, they are a great place to get some good free advice.

- [SUSE and Karunya Institute of Technology and Sciences collaborate to enhance cloud and open source learning](#) [3]

The SUSE Academic Program, the education arm of SUSE, and Karunya Institute of Technology and Sciences (KITS), have signed an MoU to collaborate in providing Linux and open source learning and skills to students. The program aims to provide aspiring professionals with essential technical expertise and help them leverage opportunities in the cloud job market via 'SUSE Certified Administrator (SCA) in Enterprise Linux' certification.

SUSE will support the program with all course materials for cloud-related technologies such as DevOps, cloud application development, cloud administration, and enterprise Linux.

Marco Kraak, Vice President of Channel, SUSE EMEA and APJ, said, 'As a leader in open source, SUSE understands the changing dynamics of the IT industry. Through the SUSE Academic Program, we have been supporting academia to meet the changing demands of the digital economy by providing open source knowledge, training materials and an affordable

education opportunity that benefit students as they explore job possibilities in the fast-growing technology space.?

Rajarshi Bhattacharyya, Country Manager, SUSE India, added, ?At SUSE, we believe that by educating and preparing the next generation of professionals, we are ensuring the future growth and adoption of open source. Our collaboration with KITS will pave the way for learning and skill development in this area.?
