# Manjaro with KDE on a MacBook Pro

By *Roy Schestowitz*

Created *14/01/2020 - 10:31pm*

Submitted by Roy Schestowitz on Tuesday 14th of January 2020 10:31:48 PM Filed under [GNU](#) [1] [KDE](#) [2] [Linux](#) [3] [Mac](#) [4]

With that away, I just installed purely Manjaro Linux on my MacBook last evening, who cares, I anyways don?t use

macOS at all beside as VirtualBox startup environment.

I searched for some pointers in the internet, in the past I already had some parallel install. If you search a bit, you will find various hints how to do it.

[...]

For me this did the job and the stuff is running well enough. The webcam won't work without additional effort, not that I use it. No idea if Bluetooth or other stuff like the Thunderbolt ports work, but I never used that even on macOS.

Fortunately the HiDPI support on Linux & Qt & KDE has gone a long way since my initial try 2015 and now, with some scaling of 1.5 or 2, it is all nicely usable ;=)

Given I still have some macOS machines available at work, I might still try out some Kate bundles there from time to time, but my personal life is now macOS free.
