- [Plasma 5.18 LTS Beta](#) [2]

This new version of your favorite desktop environment adds neat new features that make your life easier, including clearer notifications, streamlined settings for your system and the desktop layout, much improved GTK integration, and more. Plasma 5.18 is easier and more fun, while at the same time allowing you to do more tasks faster.

Apart from all the cool new stuff, Plasma 5.18 also comes with LTS status. LTS stands for "Long Term Support" and this means 5.18 will be updated and maintained by KDE contributors for the next couple of years (regular versions are maintained for 4 months). So, if you are thinking of updating or migrating your school, company or organization to Plasma, this version is your best bet. You get the most recent stable version of Plasma for the long term.

Read on to discover everything that is new in Plasma 5.18 LTS?

- [Here?s What?s New in KDE Plasma 5.18 LTS](#) [3]

With a beta build now available for testing I figured it was time to recap the key changes included in KDE Plasma 5.18 LTS so that those of you who ride the plasma wave have some idea of what to expect when it arrives.

And do expect a varied set of changes when it does, as there?s lots planned, including notifications that are easier to understand, streamlined organisation of system settings, better integration of GTK applications, and plenty more.

Let?s take a closer look.

Out this morning is the first beta of KDE Plasma 5.18, which is also the project's first long-term support (LTS) release since Plasma 5.12.

Some of the changes to find with the forthcoming KDE Plasma 5.18 LTS include:

- Support for GTK applications using client-side decorations. Additionally, GTK applications now inherit Plasma settings for fonts / icons / cursors and more.

- [KDE Plasma 5.18 LTS Desktop Environment Enters Beta, Here's What's New](#) [5]

The KDE Project announced today the general availability of the beta version of the upcoming KDE Plasma 5.18 LTS desktop environment for Linux-based operating systems and Linux-powered devices.

KDE Plasma 5.18 is a major version of the popular Linux desktop environment as it's the third LTS (Long Term Support) series, coming three and a half years after the first LTS branch and two years after the second one. This means that KDE Plasma 5.18 LTS will be supported with maintenance update for the next two years.

"LTS stands for "Long Term Support" and this means 5.18 will be updated and maintained by KDE contributors for the next couple of years (regular versions are maintained for 4 months). So, if you are thinking of updating or migrating your school, company or organization to Plasma, this version is your best bet," reads today's announcement.
