Arguably the most striking feature of this neo-noir desktop in the video above is the vivid live wallpaper. Atmospheric, this instantly instills an edgy, futuristic vibe reminiscent of films like *Blade Runner*, *Dark City*, and *eXistenZ*.

I am even more impressed by easy it is to recreate the whole look (assuming you're running KDE Plasma desktop) for yourself.

On a regular Ubuntu desktop with GNOME Shell setting up a live wallpaper requires some a bit of effort (installing an unmaintained app from a random repo or getting tricky with `mpv`, fining the numbers and deftly placing enough

hyphens).
