Today, we're pleased to announce that the latest beta version of the world's leading enterprise Linux platform, Red Hat Enterprise Linux (RHEL) 8.2, is now available. Maintaining our commitment to a predictable, six-month release cadence for minor platform releases, RHEL 8.2 Beta is designed to make it easier for IT organizations to adopt new, production-ready innovations faster. This same cadence and engineering process is also intended to help our hardware partners more quickly deliver supported hardware configurations, furthering customer choice for their datacenter estates.

Beyond the continued benefits of the regular release cadence, RHEL 8.2 drives enhancements to the user experience for both new and existing customers, extends monitoring and performance capabilities and adds new supported developer languages and tools.
