Here comes a new draklive release, it's been a long time since the previous pre-2007.0 release. Developing Mandriva Flash required some new features, but also helped to stabilize my (precious) live creation tool.

There has been a bunch of changes, to sum up:

- easier to create CD-Rom/USB boot images for live systems
- easier to create 32 bits live systems from x86\_64 host
- improve writable loopbacks reliability on USB devices, by doing an early fsck check from initrd
