- [GCompris an educational suite for the youngest in the family](#) [2]

GCompris is an educational suite that offers more than 100 activities for children from 2 to 10 years old. Some activities are game-oriented, but still educational. Here is a list of activity categories with some examples:

Discovering the computer: keyboard, mouse, touch screen?

Reading: letters, words, reading practice, typing text?

- [Season of KDE](#) [3]

Since my last blog, I got really busy with my college and got less time to work on the website. I took some screenshots whenever I got the time and planned the work to be done.

After 40 about days of coding, taking screenshots, writing documentation, the caligra website is ready, Well almost ready. The only thing that remains is the component selector in the navbar. The task of adding the selector is not that difficult, the difficult part was to add it to the KDE Jekyll theme so that it could be used by all websites old and new.

I have managed to complete the task and submitted a merge request on the jekyll theme repository. My mentor will check it and hopefully it gets merged soon.
