Following on from MAAS 2.6.2, we are happy to announce that MAAS 2.7 is now available. This release features some critical bug fixes, along with some exciting new features.

For some time, our users have been asking for the capability to deploy CentOS 8 images in MAAS. With the advent of MAAS 2.7, that is now possible. The Images page in the MAAS 2.8 UI offers the option to select and download CentOS 8. It is important to note that users of previous versions may see CentOS 8 as an available option, but cannot download or deploy it.
