With faster performance, huge optimizations with effects, and improved UTF-8 character support, OpenShot 2.5.1 is the best version yet, bringing powerful and simple video editing to the open-source world!

The OpenShot team has been very busy over the past few weeks, and we are proud to release OpenShot 2.5.1! While we don't normally release so quickly, we had a show-stopping bug with version 2.5.0 (mostly related to UTF-8 support of non-ASCII characters), and decided to put out a fix as quickly as possible. However, we were also able to "sneak in" some really awesome improvements at the same time!
