The trust of our customers and partners is the lifeblood of SUSE. This is what has driven our innovation and success over the last 28 years. In the current environment, it is a priority for us to not only maintain, but also grow, this trust and to extend our support.

Over the course of the last month, I've heard from many customers and partners who have found their businesses unexpectedly disrupted by the COVID-19 situation. I'd like to take this opportunity to share a personal assurance with all our customers and partners: SUSE remains fully committed to you and your business.

During this time and as always, we are determined to ensuring your mission-critical business is running wherever you may be located. We have established a Business Continuity Committee to ensure you continue to receive outstanding open source innovation, support and services from us.

India was accepted to host the openSUSE.Asia Summit 2020. openSUSE.Asia summit is going to be held for the first time in India, Faridabad. Faridabad is a district of Haryana situated in the National Capital Region bordering the Indian capital New Delhi.

The supporters of openSUSE in India, and of Free/Libre Open Source Software (FLOSS) at large are excited to organize the most awaited openSUSE.Asia Summit event. In this activity, experts, contributors, end users, and technology enthusiasts will gather to share experiences about the development of openSUSE and other things related to FLOSS and have a lot of fun.

The venue for the openSUSE.Asia Summit was chosen after being proposed by the Indian community during openSUSE.Asia Summit 2019 in Bali, Indonesia. Finally, the Asian committee decided Faridabad as the host of openSUSE.Asia Summit 2020 from September 25 to September 27, 2020, at Manav Rachna International Institute of Research & Studies, Faridabad.
