For a brief while, I did ponder reinstalling the system from scratch, but then decided against it. The problems I encountered were small (if annoying), and I was able to resolve them quickly. The system works well, it's fast enough. Not bad for a 2013 laptop that was made to be frugal to begin with. Now ideally, there should be no niggles and no upgrade ghosts, but there you have it. As far as the road test goes, I had everything I needed in strange and foreign

places, and the Vivobook + Plasma did their job dutifully.

I will probably follow up with one or two more articles of this nature in the future. I'm not sure how extensively I'm going to be using the Ultrabook, but then, its age will be an interesting factor to reckon with. My older laptops are handling the brunt of passing years fairly well, but they were also in a higher cost category when new. With this machine in the mid-price range, I don't really know how things are going to evolve. That's about it for now. The end.
