We are happy to announce the release of Qt Creator 4.11.2!

We fixed the default target project when creating files with wizards, and the debugging of Qt Quick tests. We also got rid of several issues with the editor. Have a look at our changes file for a more complete list.

The opensource version is available on the Qt download page under "Qt Creator", and you find commercially licensed packages on the Qt Account Portal. Qt Creator 4.11.2 is also available as an update in the online installer. Please post issues in our bug tracker. You can also find us on IRC on #qt-creator on chat.freenode.net, and on the Qt Creator mailing list.
