The first open source video conferencing solution that comes to mind is Jitsi. It is licensed under the Apache 2.0 license and written in both Java (For desktop/mobile) and Javascript (Web client).

Jitsi is one of the best open source alternatives for Zoom, because it is not just a client/server app. Instead, the Jitsi team releases all their libraries, APIs, server instances and infrastructure as open source. This makes you capable of inspecting any single component you may think of (E.g for government requirements) or deploying your own instances of everything.

Their clients are open source too. They provide mobiles apps for iOS and Android, and a web client for everything else.
