[SUSE Linux Enterprise 15 Service Pack 2 Public Release Candidate 1!](#) [2]

Since Public Release Candidate 1 is released more than 2 months after the release of the Public Beta, tons of fixes and enhancement is included in this milestone.

[SUSE Manager 4.1 Public Beta 3!](#) [3]

We are pretty excited to announce SUSE Manager 4.1 Public Beta 3. As usual, we have prepared tons of updates and we hope you will like it. We also now have a new Public Mailing List, so you can share your feedback with our Public Beta Community, our Engineering and our Product Managers.

[openSUSE Tumbleweed ? Review of the week 2020/17](#) [4]

The last week was filled with success. The major change was surely the removal of python2-FOO modules from the distro. Not exactly all are gone yet (packages that fail to build do also not change the published modules), but we went from 2564 (Snapshot 0417) modules down to 203 (0422). But of course, that's not all that has happened. After all, we released 6 snapshots in the last week (0415, 0416, 0417, 0419, 0421 and 0422).
