Dear digiKam fans and users,

Just few words to inform the community that 7.0.0-beta3 is out and ready to test two month later the second beta release published in February.

After a long test stage while this Covid-19 containment, this new version come with more than 670 bug-fixes since last stable release 6.4.0 and look very promising. Nothing is completed yet, as we plan one release candidate version before next spring, when we will publish officially the stable version. It still few bugs to fix while this pre-release campaign and all help will be welcome from the community to stabilize codes.
