A screenshot of a code cell in the Cantor application. The cell contains a Python code snippet: 

```
>>> for i in range(100):  
    print(i)
```

The code is displayed in a light gray box with a dashed border. A mouse cursor is visible over the code.

We continue working on improving the usability of Cantor. Another important change in 20.04 is the new feature collapsible cells which allows the user to collapse the results of a calculation. This is useful when doing many calculation in one worksheet and there is the need to hide some of the results temporarily to get more place in the worksheet or to be less distracted by what is not needed right now. For this, we introduced a new control element for every cell in the worksheet. By double clicking on this new element the result part of the cell is collapsed.

Alternatively, the results can be hidden by selecting 'Hide Results?' from the context menu of the command entry in the worksheet. This step can be similarly undone to show the results again.
