A new batch of Plasma5 packages for Slackware-current is available now. The KDE-5_20.05 release is also the last monthly update you'll see from me for a while in my `?ktown?` repository. I expect Pat to add Plasma5 to Slackware-current, but I am done waiting and have an urgent need to dedicate my spare time to other matters. With PAM finally added to the core distro, there should no longer be a showstopper for getting rid of KDE4 and replacing it with Plasma5.

And remember, these packages will not work on Slackware 14.2. Along with adding the May batch for -current, I have removed the old (KDE 5_17.11) Plasma5 packages that were still in my `?ktown?` repository for Slackware 14.2. They have been un-maintained for two and a half years, who knows what security issues they cause. If you really want or need Plasma5, migrate to Slackware-current please.
