TUX MACHINES may seem to have become rather slow if not unreachable at times. Over the past few months we've had issues with bots that request as many as 10,000 files per minute from the site's server, which is obviously unable to cope with the load/bandwidth and actually deliver what's requested. Sometimes it even resets Apache in order to regain order. At the moment we lack a permanent solution, but we have some mitigations in place.

More than 5 years ago we had to stop new account sign-ups due to spammers setting up loads of dummy accounts (hundreds per day), then directing these to vandalise the site. This inevitably led to tighter control from an editorial perspective and it reduced the number of comments.

Running a site is no picnic; it's a 24/7 responsibility. We do the best we can to maintain a reliable service whilst at the same time also pursuing the latest news stories of interest. This takes a huge amount of time and dedication.

If it is difficult to reach the site or if the site feels very slow, it's almost definitely due to those bots. The server's uptime is now 160 days.
