After making it hard for users to install the Chromium web browser on their distributions by deciding to drop support for Ubuntu's Snap universal packages with the Linux Mint 20 release onwards, the Linux Mint developers are now packaging Chromium and distributing it through the official repos.

Chromium is not only available in Linux Mint, but also in the Debian spin LMDE (Linux Mint Debian Edition). Users can now easily install the open-source web browser with a few mouse clicks. Depending on the edition you're using (Cinnamon, MATE or Xfce), all you have to do is open the Software Manager and install Chromium.
