# Fedora 33 Workstation review

By *Rianne Schestowitz*

Created 09/11/2020 - 4:28pm

Submitted by Rianne Schestowitz on Monday 9th of November 2020 04:28:20 PM Filed under [Red Hat](#) [1] [Reviews](#) [2]

I don't think there's much to be said at this point. It's all written above. Fedora 33, like 99% of distros out there, does not have sufficiently friendly defaults for the average user, let alone anyone coming from the Windows world. Perhaps the nerdy features could be useful to developers and alike - latest kernel, BTRFS and whatnot - but ordinary people don't know what these are, don't care, and they just want to watch videos without heaving. Having to worry about trifles like font, media playback or minimize button. Nah.

My intention is to still go through all the way and try to create a useful baseline for the common desktop user. This will include a complete revamp of the desktop, installation of a dozen different applications, and several dozen tweaks. Similar to my Fedora 32 guide, probably almost identical. But that's just because I want to see what needs to be done, and if there's anything useful I can offer my readers. I can't recommend Fedora for everyday usage, and I feel quite sad and resigned at the end of this short testing session. Take care.
