Submitted by Roy Schestowitz on Thursday 22nd of July 2021 11:10:22 PM Filed under [Software](#) [1]

Firewalld was started by Red Hat a decade ago for managing Linux firewall functionality with Netfilter. Ten and a half years after the first release, Firewalld 1.0 was released this afternoon.

Firewalld 1.0 comes with breaking changes including dropping of Python 2 support, other dependency changes, support for intra-zone forwarding by default, NAT rules being moved to iNet family, the default target now being similar to reject, deprecating the older IPTables back-end, and more.
