Geniatech's \$179-and-up APC820 media player mini-PC runs Android or Linux on Rockchip's RK3399 with up to 4GB RAM and 128GB eMMC plus GbE, HDMI in and out, 4x USB, and optional TV tuners, WiFi/BT, LTE, and other wireless links.

Geniatech has launched a media-focused, wireless ready mini-PC based on the Rockchip RK3399 aimed at commercial displays such as signage solutions. The APC820 also has a bit of a set-top feel to it with its optional digital TV tuners. Other RK3399-based mini-PCs include Firefly's Station P1.
