More than four months in development, 4MLinux 37.0 is here with support for more software that you can install via extensions, since this is a modular Linux distro. The new apps that you can install in this release are the Dmidecode tool for reading hardware-related data from SMBIOS, FluidSynth software synthesizer with VMPK (Virtual MIDI Piano Keyboard), HandBrake video transcoder, and qBittorrent BitTorrent client.

Under the hood, there are even better news as 4MLinux 37.0 is powered by the long-term supported Linux 5.10 LTS kernel series, which has been patched to support the Reiser4 file system. This means that you should be able to install 4MLinux on a Reiser4 formatted drive, but also to handle such disk drives.
