Yesterday I downloaded a copy of Ubuntu's latest release, version 7.04 Feisty Fawn. The download took some hours because of busy servers but I think that it was well worth it.

I don't want to overhype anything but I can say with all honesty that Ubuntu 7.04 is by far the best and easiest version of Linux that I've used. The Live CD worked flawlessly for me and allowed me to road-test features without the hassle of installation. The installation was also a snap and the step-by-step wizard is really easy to follow - as easy, if not easier, than a Windows installation.

I can't say that the Ubuntu installation process is a fast one, it isn't, and felt a lot slower than installing Windows Vista, but the end result was an OS that worked, was snappy and has loads of apps pre-installed. Nice. Very nice!
