- [Announcing a New Video Series: Video Editing with Linux](#) [3]

When we were designing the Librem 14, we wanted it to be our dream laptop in all possible respects. This meant squeezing the most resources we could fit in there that could run coreboot and PureBoot. We settled on a tenth generation Intel i7 10710U CPU with 6 cores and 12 threads and combined with up to 64GB RAM and fast NVMe storage, we feel this is a great laptop for resource-intensive tasks like video editing.

Instead of just telling you about it, we thought it would be useful to show you. While we could just do a high-level marketing video that demonstrated a bit of video editing on the Librem 14, we thought it would be better (and more aligned with our Social Purpose) to invest in a complete tutorial series that would teach people how to edit videos on a Librem 14 running PureOS.

We thought who better to teach you how to edit videos in Linux than someone who does it professionally, so we partnered with Gardiner Bryant to produce a complete series. This series will cover all the major aspects of video editing from selecting video editing software through to each step in the process.

[Why Universal Linux Apps are GREAT! - Invidious](#) [5]

Universal Linux Apps/Packages (Flatpaks, Snaps, AppImages) seem to get a lot of hate in the Linux community, but why?! In this video, I talk about why this type of technology is not only necessary, but a good thing.
