Submitted by Roy Schestowitz on Friday 26th of November 2021 09:18:51 PM Filed under [BSD](#) [1]

This new ISO contains kernel, OS, and software updates. In addition, I added a new command-line software called `ghostbsd-version` that gives you the GhostBSD version, FreeBSD version, kernel version, and OS version. At the date of this release, if you run `ghostbsd-version` or `ghostbsd-version -v`, it should output 21.11.24. This version number will be increment by the date of new packages built on packages every update performed. The ISO version is now following the last package's build version instead of an ISO's build date in the hope of removing confusion about the ISO version.
