Art of Illusion (AOI) is a 3-D graphics studio that provides modeling, texturing, animation, and rendering in a single program. It is designed to be easy to use so that new users can pick it up quickly, while still providing advanced features to let experienced users create professional-quality artwork.

It is written entirely in Java, and can run on almost any operating system. It is licensed under GNU General Public License (GPL). There are installers for Mac OS X, Linux, and Windows, but AOI can run on any OS with a modern Java VM.
