- [The Apache Weekly News Round-up: week ending 14 January 2022](#) [3]
- [January 2022 Web Server Survey](#) [4] [Ed: In Web servers, Microsoft down from 6.15% of top million domains to just 6.04% in one month]

In the January 2022 survey we received responses from 1,167,715,133 sites across 269,835,071 unique domains and 11,700,892 web-facing computers. This reflects a loss of 1.15 million sites, but a gain of 1.51 million domains and 31,100 computers.

nginx lost 7.33 million sites this month (-1.91%) but continues to be the most commonly used web server with 32.3% of all sites using it. Although nginx's share has fallen, Apache is still more than eight percentage points behind after losing 3.70 million sites (-1.31%), which has taken its own market share down to 23.9%.

nginx also leads in the domains metric, where it has a share of 26.6% compared with Apache's 23.9%. This reflects a small reduction in nginx's share ? despite a modest gain of 25,400 domains ? while Apache suffered the largest loss of 287,000 domains.

The largest site and domain growth was seen by Pepyaka, which is a web server that has primarily been used by the Wix web development platform since it switched from using nginx in 2018. The number of sites using Pepyaka grew by 4.02 million to 7.30 million this month,

while its domain count went up by 1.80 million to 3.30 million.
