# Release Manager Gives Community Update On Desktop Environment

By *Rianne Schestowitz*

Created 27/01/2022 - 6:23pm

Submitted by Rianne Schestowitz on Thursday 27th of January 2022 06:23:55 PM Filed under [KDE](#) [1] [SUSE](#) [2]

The openSUSE community received cheerful news today after Leap release manager Lubo? Kocman updated the community on the desktop environment expected for the next minor release.

Leap 15.4, which is in the alpha phase of the software release cycle, is planned to have updated desktop environments.

Kocman's email "KDE Plasma 5.24 LTS will be in Leap 15.4" informed contributors on the Project's Factory mailing list that all the "dependencies are already submitted" to SUSE Linux Enterprise. Leap is built with the same source code and exact same binary packages as SLE.
