"Ever wish you could be Michael J. Fox in *Back to the Future II* and travel to a future where city windows display pastoral scenes and the newspaper is a disposable piece of constantly updating, foldable plastic? Well, that movie magic may soon come to life, thanks to a new class of materials recently developed by researchers at Oregon State University and Hewlett Packard."

"According to researchers, the potential consumer applications are abundant. Possibilities include glass used as an electronic device to display information on storefronts or car windshields."

"For more outlandish applications, recall movie technology. Think of Tom Cruise's *Minority Report*, or a lesser-known sci-fi movie from 2000 called *Red Planet*."
