Ubuntu Linux is one of the most popular Linux distribution , it is especially popular among Linux newbies and windows refugees . Now Ubuntu Linux does come with a descent set of applications , still there is a scope for including some more quality applications and especially games . Now in this tutorial i will show you how to install a large number of small , easy and less resource hungry games on Ubuntu Linux with screen-shots of games .

1. Rocks 'n' Diamonds

Rocks 'n' Diamonds is a Boulderd*sh game for X11 with more than just the falling rocks and diamonds of its namesake. The object is still to collect all the diamonds (and emeralds), then get to the exit before time runs out. But your character must make use of bombs, spaceships, and many other elements in order to fill his quota of jewels.

2. Globulation 2

Globulation 2 is an innovative Real-Time Strategy (RTS) game which reduces micro-management by automatically assigning tasks to units. Globulation 2 brings a new type of gameplay to RTS games. The player chooses the number of units to assign to various tasks, and the units do their best to satisfy the requests. This allows players to manage more units and focus on strategy rather than individual unit's jobs. Globulation 2 also features AI allowing single-player games or any possible combination of human-computer teams.

3. Pysol

4. Super Tux
