Almost all men experience anxiety about the size or appearance of their distro at some time. For most men, these feelings will pass but, for others, they can be persistent and disabling. A man's concern about his small distro can lead to avoidance of lan parties, coffee shops and other activities where other men might see his small desktop distro. Such men are not only embarrassed by the apparent smallness of their distro, but frequently also feel ashamed and silly about their anxiety, too. If you're tired of suffering from Small Distro Syndrome (SDS), we have help available now! Get a super large distro! Be the envy of other men! 100% guaranteed!

*The most common side effects with Debian were headache and upset stomach. Eye Strain and wrist ache were also reported, sometimes with delayed onset. Most men weren't bothered by the side effects enough to stop using Debian. As with any distro, in the rare event of a configuration session lasting more than 4 hours, seek immediate geek help to avoid long-term downtime.*
