Gentoo seems to be having problems with .?1? releases ? 2007.1 was cancelled and now 2008.1 has been cancelled. The Gentoo project has also announced a desire to move to a more ?back to basics approach? where they are doing weekly builds of Gentoo stages.

Good idea. As many of you know, I am already building fresh stages for x86, i686, athlon-xp, pentium4, core32, amd64, core64, ~x86 and ~amd64 as well as OpenVZ templates at <http://www.funtoo.org/linux>.

Since I've been building Gentoo stages for a while, I know that Gentoo?s catalyst tool (the tool that is used for Gentoo releases) is in poor shape ? it has been poorly maintained over the years and also does not have any documentation, so it is not really up to the task of building Gentoo releases anymore.
