Foresight is awesome, finally gave it a shot and it is now my main distro. I am running it on my desktop pc, which is an Intel E8500 with a Nvidia 7600gt graphics card. It runs fast and seems way faster than Ubuntu 8.10 did. The only extra I installed was the extra codecs for MP3 playback. Flash works great and doesnt have any flicker to it. When I was running Ubuntu I got a weird flickr when watching flash video. I would highly recommend this distro to any one that wants a great solid OS on their machine. I have a couple of screenshots with more to come on my blog. Linuxspecs.com
