Unlike past times, Linux do come with good fonts. And the font rendering can be made better by choosing to antialias the fonts. But at times you come across a website which has been designed with the windows user in mind. Such websites are best viewed with one of the windows fonts. If you have windows OS installed on your machine, you can copy the essential fonts from the windows partition to linux and use them to get a better web experience. Here is how you do it.
