If you load up the Internet Movie Database (IMDb) today, you'll see a new logo commemorating its 19th birthday. Yes, that's really old for the Internet. Google, by comparison, is 11. Meanwhile, Yahoo is 14. IMDb is so old in fact, that it pre-dates the first web browsers. How?

Founder Col Needham explains the history a bit in a birthday message today. IMDb was born on October 17, 1990 as a series of Unix shell scripts to let users search the USENET group, rec.arts.movies. It wasn't called IMDb yet (that came four years later), but it was the beginning of being able to search for movie information on the Internet.
