eBox Platform is an open source small business server that allows you to manage all your services like firewall, DHCP, DNS, VPN, proxy, IDS, mail, file and printer sharing, VoIP, IM and much more. These functionalities are tightly integrated, automating most tasks, avoiding mistakes and saving time for system administrators. This tutorial shows you step by step how to [use eBox as a Windows Primary Domain Controller](#) [2]. At the end of it you will be using eBox Platform 1.2 for users and shared resources management on your Windows domain.
