Why aren't Linux phones using SyncML?

There's one thing about the Nokia N900's Debian-based Maemo OS that I find bewildering and infuriating at the same time. It's the lack of full support for SyncML ? and in its place, Microsoft Exchange.

On such an unabashedly open-source device this is? well, it's inconceivably stupid. Embarrassing even ? except that other ?open? device manufacturers are guilty of the same crime.

More here...
