Submitted by dangareyes on Friday 11th of June 2010 05:28:12 PM Filed under [Linux](#) [1]

Some months ago, i wrote article "3 Reasons why we shouldn't use Linux?", after a lot of comments on the article in the favor of Linux, I thought i should also try Linux. So i downloaded Fedora 13. Then i made fedora 13 Live USB and boot my computer from USB, after boot fedora logo came and then system went on Standby. I thought that Linux was loading Files so i waited a long. After 10 to 15 minutes of wait, nothing happened, my system was on Standby, when i pressed power button, system turned off. I thought that was Fedora fault, then i downloaded Ubuntu 10.04, but i faced the same problem with Ubuntu.
