A long anticipated 64-bit version of PCLOS was reported to be in development this past November. And as 2010 draws to a close, some wonder what is its current status. Bill Reynolds, not known for long winded conversations or laying out rigid development schedules, has given a bit of an update.

Progress is being made on the new architecture to be released by the PCLinuxOS team, although the holidays and seasonal vacations have cut into development time this December. The PCLinuxOS development team is very small even when compared to some other smaller distributions, and when one or more goes on vacation, it can have an impact. But when the team leader needs time off progress tends to slow down dramatically.
