Bodhi has released 0.1.7, a further development release of the Bodhi Enlightenment desktop Linux distribution. As I've mentioned before, Bodhi is focusing on providing usability with a minimal footprint.

By using the Enlightenment graphics environment, Bodhi creates highly configurable, and aesthetically pleasing, visual effects without loading the system down with bloat.

As Bodhi is a tributary of Ubuntu, and so it's no surprise that Bodhi works as a liveCD and not just an install disk. As an old Debian hack myself, I'm so used to install disks doing nothing but installing that it's still a bit of a pleasant surprise.
