We are pleased to announce the birth of the Canterbury distribution. Canterbury is a merge of the efforts of the community distributions formerly known as Debian, Gentoo, Grml, openSUSE and Arch Linux to produce a really unified effort and be able to stand up in a combined effort against proprietary operating systems, to show off that the Free Software community is actually able to work together for a common goal instead of creating more diversity.

Canterbury will be as technologically simple as Arch, as stable as Debian, malleable as Gentoo, have a solid Live framework as Grml, and be as open minded as openSUSE.
