The developers of the SystemRescueCd and the Parted Magic multi-platform partitioning tool have released new versions of their Linux distributions. Both of the updates are based on the latest 3.0 release of the Linux kernel and offer a number of changes and package updates, such as Firefox 5 and version 0.9.0 of the GNOME Partition Editor (GParted).

Version 6.4 of Parted Magic has some "major improvements" on systems with Radeon and Mobile4 graphics cards. Other changes include updating Clonezilla to version 1.2.9-19. The developers also note that SMP support was removed from the i486 kernel, and an option to use the NV driver has been added to the failsafe menu due to issues with the Nouveau X.org driver.
