The webcam has become an essential accessory for every computer user. The tiny camera above your monitor helps you chat and ?hangout? with all your friends from across the world or turn it into a security spy camera. Another great thing about webcams is that they help you snap your own picture without getting up from your chair. For workaholics, a webcam is a great tool to stay in touch with their colleagues and even hold meetings with them. Being this indispensable, the software for it has to be just as good as the hardware.

For Linux users, that wasn?t always the case until mainstream applications like Cheese came out. Since then, the penguin has been very friendly to the webcam. In fact, I was pleasantly surprised when my PlayStation-Eye camera, which refused to work on Windows (without a driver), worked flawlessly from the instant I plugged it in. So, if you?ve just plugged in your shiny new webcam and are looking to snap pictures or shoot videos of yourself, then here are some of the best webcam software applications for Linux.
