I've spent most of my time recently working on two or three of my new (or not so) sub-netbook systems, with surprising results. This information might be useful to others who are looking at such systems:

HP Pavilion dm1-4010ez: This is the newest of the lot, and it really is a very nice system. It loaded and ran flawlessly with every Linux distribution I tried on it, including openSUSE 12.1, Fedora 16, Linux Mint 12 (with Cinnamon), Ubuntu 11.10, Linux Mint Debian 2101109 Gnome, PCLinuxOS 2011.09 and probably one or two others that slip my mind right now. It really was a pleasure to use - so much so that a friend who needed a replacement for a very old ASUS netbook I had set up several years ago ended up taking this one from me. Ah well...
