There's been a great deal of excitement this year about tiny, cheap computers such as Cotton Candy and Raspberry Pi, and no wonder: Linux-powered devices like these are nothing short of a computing revolution, both for the way they make technology more accessible to those who wouldn't otherwise be able to afford it, and for lowering the cost of innovation and experimentation for everyone.

Now, there's yet another example.

Currently available for as little as \$70, the Mele A1000 is a small ARM device that runs Android but can apparently be configured to run Ubuntu Linux as well.
