How many times one of your friend has called you to his home to complain about a problem with the PC? What to do there then? If he's a friend we try to give him a hand. So we improvise as computer technicians. I can only give you a hand improvising, in turn, I'll give you a list of things to have with you when you go to their home.

I focused the article, as you can see from the title, mostly on the Live Distro. Why this choice? Simply because if the PC does not want to start after a corruption of the Operating System what remains to do is only one thing! Format all. So we must first find a way to recover the data from the PC that not start.

Let's start as first thing, it is always good to have with us a laptop with an Internet Key. None of us is omniscient and so a search on the Web could be very helpful.
